

Practical Vision

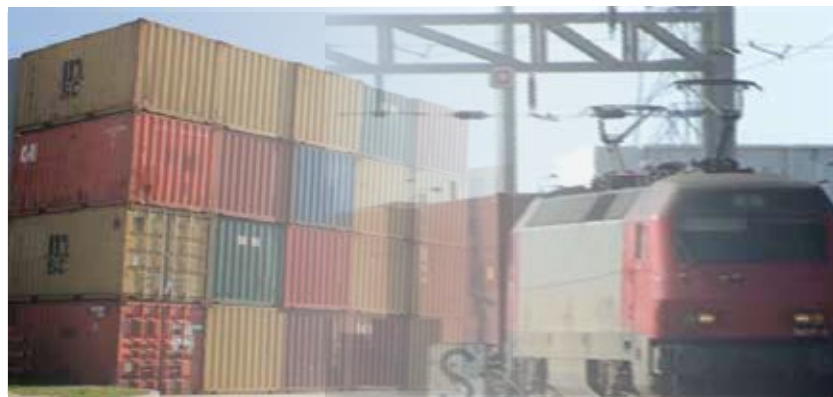

A holistic approach to security systems implies integrated support, logical and physical, coordinated between the various components, specialties and operations.

In complex facilities, access control systems are essential for security issues - controlled access areas according to existing risks.

Access control, video surveillance, intrusion and monitoring Control Centers, multidisciplinary and suitable for 24x7 operation.

In Control & Safety operations, ID-System supports operational components Gate In / Out, with the integration of logistic processes.

About egapi

Innovation and **Engineering**
Striving for perfection

Established in 1990, EGAPI is an Information Technologies and Industrial Automation company. EGAPI Technologies develops software suites that are a reference in the economic sectors in which it operates.

Focused on each client needs, specificities and business areas, we have specialized teams and capitalize knowledge in reference implementations.

Integrating information systems with equipment and automation systems, we create solid operating and management models.

We believe in the quality and expertise of our teams, technology partners and solutions, which generate growth and add value to our Reference Customers.
